PRINTING OPTIONS

I'd love to print your items for you! Printing quotes are available upon request and vary based on printing method and quantity. Let's chat!

A brief rundown of printing options:

FLAT PRINTING

This is your most common type of printing and what you most likely see on day to day printed items. Ink is transferred from printed to paper created a crisp, clean and traditional effect. This is the most budget friendly option!

GOLD FOIL PRINTING

For those who want to really make a statement- there's foil printing! This comes in a range of metallic colors and involves heat, pressure, metal dies and foil film.

The process involves heat pressing the metallic foil into the paper which then sticks to certain dies. Expect to pay more than flat printing for the added pizzaz!

LETTERPRESS PRINTING

This is method that started in the 1800's- it's a beautiful, labor intensive and ancient art! These are printed one at a time by hand! The ink color is mixed by hand, applied to a metal plate and then pressed into the paper creating a beautiful textured imprint. It's gorgeous but it takes some time and labor so expect to pay a little more for this type of printing.
